# SOCIO-ECONOMIC REPORT – FEBRUARY 2008

Since1996 UNSCO has continually monitored and reported on socio-economic conditions in the occupied Palestinian territory and in the process established an extensive socio-economic database. UNSCO does not create raw data but rather uses available data which, in the occupied Palestinian territory is relatively abundant. However, the data that is available tends to remain dispersed and is not always automatically shared between institutions. The objective of the database is to bring together in one place a wide variety of data on socio-economic conditions and by doing so present a broader, more detailed perspective on socio-economic conditions. The purpose of this report is to: 1) broaden the access to this database through publication of the most recent data gathered; and 2) provide readers with up to date information on socio-economic conditions in the occupied Palestinian territory.

The report is divided into three sections:

Section 1 consists of a one-page fact sheet which provides a snapshot view of the socioeconomic situation of the current and previous reporting period and for reference purposes provides base line figures for the period just prior to the outbreak of the second *Intifada*.

Section 2 and 3 report on the Macro-economic and the Private sector and banking modules of the UNSCO database. They provide data on the last six reporting periods for each indicator as well as base line data. In addition, some initial analysis on observed trends is given below each table.

<sup>&</sup>lt;sup>1</sup> For a more detailed report on sections C (Macro-economy) and D (Private sector), see the attached UNSCO reports <sup>2</sup> CPI Base year 1996 = 100

<sup>&</sup>lt;sup>3</sup> Number of truckloads. MoNE data does not include aggregates or aid flows.

<sup>&</sup>lt;sup>4</sup> Adjusted unemployment is calculated by adding discouraged workers (i.e. unemployed but no longer seeking work) to the ILO standard. <sup>5</sup> Effective closure days are calculated by adding all days when a crossing was fully or partially closed minus weekend and holidays.

The US\$-NIS exchange rate has sharply dropped in February, 2008. The declining dollar may slightly benefit the Palestinian economy, as imports (including energy imports) could become cheaper.

Registered fuel sales in the Gaza Strip dropped even further than last month. The marked drop in registered fuel sales is due to the significant decline in fuel supplies to Gaza, and this confirms the deterioration in economic activity in Gaza.

Truck movement to Gaza has been restricted to humanitarian supplies only since 12 June 2007. Exports were stopped altogether at the same time only approximately 78 truckloads of strawberries and flowers grown with the support of the Netherlands have been exported since. Furthermore, the total number of imported truckloads has slightly increased in the month of February.

The Israel-oPt trade balance which had reached almost half a billion per quarter in the early part of 2007, has dropped 15 percent since the first quarter of 2007 primarily as a result of declining goods exports from Israel to the oPt. A second interesting finding is the fact that despite the complete halt of exports from Gaza, total oPt exports to Israel remained at the same level as during previous quarters.

The number of new company registrations is used as a proxy indicator for the vitality of the local economy as well as the ability of the local economy to create new employment. New company registrations in the West Bank has increased in February 2008 by about 27%. However, if compared to pre-Intifada levels new company registrations has dropped by approximately 56%. In Gaza, new company registrations remained at its all-time low of zero.

Similarly to new company registrations, the area licensed for new construction is used as a proxy indicator for economic vitality. As some engineering offices and consulting firms had not yet confirmed their registration as licensing offices, the January data were skewed downward. If compared with November data, February data indicates a drop in area licensed for new construction, by approximately 27%.

Data on bank credit is used as a proxy indicator for perceptions of economic progress (increasing use of bank credit, particularly in the main productive sectors) or decline (decreasing use of bank credit) - the Palestine Monetary Authority provides adjusted monthly data once per every three months. The last six months of 2007 show a distinct decline in the use of bank credit, a trend that is particularly evident during Q4-2007 in the main productive sectors (manufacturing, construction, general trade). In contrast, the use of bank credit increased by over 32 percent in the financial services sector, most likely as a preventative effort by banks to stave off implications of potential severance of relations with Israeli banks. Bank credit to the public sector has more than tripled if compared with the pre-*Intifada* period.

|  |                                       | - / -                                 |                                       |                                       |                                       |                                       |                                       |

Disaggregating bank credit by the type of credit, confirms the relative stability of the banking sector. The ability of the PA to resume regular salary payments will have had some impact in the decrease of loans.

Disaggregating bank credit by the borrowing entity shows that consumer lending has declined significantly in the third quarter of 2007 and continued to drop in the fourth quarter. The most likely reason for this development is the continued risk-adverse stance of Palestinian banks combined with the recommencement of the regular payment of PA salaries which has allowed a number of PA staff to pay off existing loans and has reduced the demand for credit.

In an efficient economy an increase in the loans versus deposits ratio is a positive signs as monies are not saved but invested or consumed, each of which is a stimulant for the economy. Since September 2006, this ratio has steadily declined (by over 26 percent) in the oPt signaling little optimism concerning the Palestinian economy which limits appetite for domestic investment and thus increases deposits. The sharp drop in the third and fourth quarter signals heightened concern with regard to overall economic performance, most likely due to the events in Gaza since June 2007.

Similar to bank credit and deposits, data on the Palestinian stock exchange is used as a proxy indicator of Palestinian perceptions vis-à-vis the state of the national economy. The data for February 2008 data shows a slow down in trade at the stock exchange both in terms of value and number of stocks traded. The Al-Quds index has slightly grown in February.
